

DHANESHWARI NERTI

daneshwarinerti0604@gmail.com | 9741750604 | Gadag | [LinkedIn](#)

Professional Summary

Recent BE in Information Science and Engineering graduate with a strong foundation in AWS, Docker, Kubernetes, Python, Linux, and Cloud Computing. Completed projects in VPC architecture with auto-scaling groups, load balancers, and multi-tier application deployment, as well as CI/CD workflows using CodeCommit, CodeBuild, and CodeDeploy. Eager to leverage analytical abilities to design and implement scalable cloud solutions and achieve optimized system performance in a dynamic cloud engineering environment.

Work Experience

Intern – Infobellit (Client: AMD)

19-01-2026 – 25-05-2026 | Bangalore

- Developed foundational knowledge of networking principles including the OSI model, TCP/IP protocol suite, subnetting, IP addressing, and routing to support cloud infrastructure and system administration
- Gained hands-on expertise in AWS networking concepts including VPC architecture, public and private subnets, route tables, Internet Gateway, NAT Gateway, Security Groups, and Network Access Control Lists
- Acquired practical exposure to DPDK (Data Plane Development Kit) for high-performance packet processing and kernel-bypass networking techniques
- Performed Linux administration tasks including user and access management, file permissions, network configuration, and shell scripting
- Provisioned and configured AWS resources including EC2, S3, IAM, Lambda, and SQS while implementing automated CI/CD pipelines using CodeCommit, CodeBuild, and CodeDeploy
- Developed Terraform infrastructure-as-code scripts to provision cloud resources including VPCs, Security Groups, and EC2 instances
- Worked with Docker and Kubernetes fundamentals including container image creation, deployment management, pod orchestration, and basic service scaling
- Explored generative AI and Large Language Model (LLM) concepts, including Retrieval-Augmented Generation (RAG) architectures and AI Agent frameworks for intelligent cloud-based applications

Education

Basaveshwara Engineering College- Bagalkot

Information Science & Engineering

2026

Technical Skills

AWS (EC2, S3, IAM, Lambda, SQS, VPC, CloudWatch, CloudFront, ECR, ECS, EKS...), Terraform, CloudFormation, Docker, Kubernetes, Linux Administration, Python, Shell Scripting, Git, AWS CodePipeline, CodeCommit, CodeBuild, CodeDeploy, Network Configuration, DPDK

Projects

Scalable Web Application Deployment on AWS

2026

- Designed and deployed a highly available web application using custom VPC configuration with public and private subnets for security and scalability
- Configured EC2 instances behind an Application Load Balancer with Auto Scaling Groups to ensure fault tolerance and automatic traffic-based scaling
- Implemented secure networking architecture using Security Groups and Route Tables to control inbound and outbound traffic

Automated CI/CD Pipeline for Python Application

2026

- Designed and implemented a fully automated CI/CD pipeline leveraging GitHub, AWS CodePipeline, CodeBuild, and CodeDeploy for continuous integration and deployment
- Automated the complete build, testing, and deployment lifecycle for a Python application
- Reduced manual deployment efforts and improved release velocity through continuous integration and continuous delivery practices

DPDK ChatBot for Pktgen Benchmark Datasets

2026

- Developed an AI-powered DPDK benchmark chatbot using FastAPI & PostgreSQL to analyze & compare networking performance metrics. Implemented AI-driven natural language querying with interactive dashboards for throughput, packet loss, and benchmark visualization.
